

CENTRAL VACS EARN BUILDERS GREEN POINTS

A Central Vacuum System vented to the outside, earns homebuilders five points toward meeting the Indoor Environmental Quality portion of the new Green Building Standards developed by the National Association of Home Builders (NAHB), and approved by the American National Standards Institute (ANSI). According the NAHB green standards, central vacuums are awarded more points than any other *indoor environmental quality* improvement for homes.

The US Green Building Council's (USGBC) LEED for HOMES program awards one certification point for a home equipped with a **Central Vacuum System vented to the outside**.

Dirt Devil® central vacuums provide homeowners with the cleanest, healthiest living environment possible, by improving indoor air quality and producing powerful, high-quality products. Dirt Devil® has been promoting the "Clean Home, Clean Air" benefits of Central Vacuum Systems since its inception. Now Dirt Devil® is able to tout its "Green Choice" feature too. National agencies and the building industry have recognized the environmental benefits of central vacuums and their importance in today's homes.

More builders are choosing to build green, so more builders are choosing Dirt Devil®!
