

NavLogix helps keep The University of Nebraska safe!

“At the University of Nebraska, we have instituted many processes and systems to help improve the efficiency of our fleet and the safety of our drivers and vehicles. We recently made the decision to purchase the NavLogix GPS System by GE Security. Various systems were evaluated with special emphasis on real time reporting, immediate notification of infractions, the ability to set speed alert rules and creating geo fences.

One of the more important reasons we purchased NavLogix was their No Upfront Costs option. We were able to fit the monthly expense into our budget which allowed us to easily get the system up and running. Since we implemented NavLogix we have had zero 65 mph speeding violations. For vehicles that are being operated in areas away from our home base, we know that policy is being followed, helping keep our users safe.”
