For Immediate Release

WEBCO Security, Inc. – Now a Partner, Designer and Installer of CAST Lighting – Manufacturer of Premium Landscape Lighting Products

Ramsey, MN – May 21, 2009 – In response to a growing demand for low-voltage landscape lighting, WEBCO Security announces their decision to offer the entire product line of CAST Lighting – a New Jersey based manufacturer.

The decision to select CAST Lighting was based on a combination of outstanding product quality, excellent customer service, and comprehensive training and technical support. Among the large number of lighting manufacturers, CAST Lighting is the only one that does not source their products out of Asia, and instead owns their own foundry where they have complete control over production.

Other distinguishing qualities of CAST Lighting are in the composition and construction of their products. All their fixtures are either solid sand-cast bronze or heavy-gauge copper. Among metals used in lighting fixtures, bronze is the most resistant to corrosion – better than aluminum, copper, and brass. Even the fixture stakes are solid bronze, making the entire fixture practically indestructible.

In a recent quality test, a CAST Lighting system was installed in Crested Butte, CO (a region with an average annual snowfall of sixteen feet). The CAST fixtures were buried in snow for a period 6 months, some under deep packed piles. They continued to function throughout the winter, and after the melt were observed to be undamaged. The local installer of this project had never seen a landscape lighting fixture survive these conditions.

Other measures to minimize corrosion are the use of high-temperature sockets, crimped and soldered connections and tin-coated marine-grade wire. While most outdoor lighting fixtures have a life of two to three years, CAST Lighting fixtures continue to function and maintain their appearance for an unlimited time - every fixture carries a lifetime warranty.

In addition to fixtures, CAST Lighting provides all other system components including transformers, wire, tools, and lamps. The transformers are the most energy-efficient and best-performing available. They have several unique features including No-Surge Soft-Start technology that prevents nuisance tripping and prolongs lamp life.

CAST Lighting also has a reputation for providing the best trainings in the industry. WEBCO will be hosting these events that include both introductory hands-on seminars and advanced classes on the business, science and art of landscape lighting.

-more-

WEBCO will start offering and installing CAST Lighting products June of 2009.

WEBCO Security, Inc provides the wiring foundation and infrastructure low voltage offerings in the areas of: structured wiring, life safety and security, distributed audio, home theater, intercom and central vacuum for residential, commercial construction and remodeling.
